

Cue Room Privacy Policy

Effective September 7, 2026

Cue Room is a rehearsal app provided by Arman Siddiqui. This policy explains how the app handles your scripts, recordings, photos, purchases, and optional AI requests. Contact curtaincallsupport@icloud.com for privacy questions.

Data on your device

Your library, dialogue, cast recordings, import drafts, unfinished line edits, selected roles, rehearsal options, and progress are stored on your device. Cue Room has no developer-operated account service, cloud library, advertising, analytics SDK, or tracking system. Your device backup settings may include app data. Cue Room does not provide an independent backup service.

Pro script import uses OpenAI exclusively to read scripts and identify characters, roles, scenes, and dialogue. The app prepares PDF pages and photos as attachments; it decodes Word DOCX containers and splits document text into sections. It does not use local OCR or Apple Intelligence for Pro import. A temporary copy of the prepared attachments and completed sections is saved in protected app storage, excluded from device backups, so interrupted imports can resume. These temporary copies are removed when you save the script or discard the draft. Original files and photos remain wherever you selected them; Cue Room does not delete those originals.

Apple cue voices and supported speech recognition operate on your device. Speech recognition requires local recognition support; there is no automatic cloud fallback. You review the OpenAI-generated transcription, character assignments, and role descriptions before saving. Saved scripts can still be rehearsed with Apple voices and supported on-device speech recognition.

OpenAI processing

OpenAI requests are off by default. Saving an API key does not send a script or test the key. You must enable OpenAI requests before using its voices, transcription, or script analysis. When enabled, uncached OpenAI voices send the dialogue, voice choice, acting directions, a short role description, and the preceding line for delivery directly to OpenAI. Choosing OpenAI transcription sends the recorded take. Tapping Continue with OpenAI during Pro import sends the selected PDF pages, images, or document text, including stage directions and any personal information they contain, in sections for transcription and character, role, scene, and dialogue analysis. PDFs and images are read directly by OpenAI. Failed sections may be retried up to two times automatically; completed sections are reused when an import resumes. Your API key authenticates these requests to your OpenAI account. Internet connection information, including your IP address, is also available to the service.

During rehearsal with OpenAI voices, one upcoming reader cue may be generated while you speak and cached for playback. Pausing or closing rehearsal cancels pending preparation; already transmitted requests may still incur charges. The optional Understand paraphrased cues setting separately permits text-only checks of your expected line and the words recognized on device, after a pause, with at most two short checks per turn. These checks do not upload microphone audio. Your live rehearsal transcript is not saved by Cue Room.

OpenAI processes these requests under its terms and your account settings. Its API data controls currently describe no training by default unless you opt in. Script analysis and rehearsal cue checks disable stored response state with `store=false`; default abuse-monitoring logs can still retain request and response content for up to 30 days. Speech generation has default abuse-monitoring retention of up to 30 days; the transcription endpoint lists no abuse-monitoring or application-state retention. Account settings, legal obligations, and safety exceptions can affect handling. See [OpenAI data controls](#) and [OpenAI privacy policy](#). Cue Room cannot change or delete records held by your provider.

The key is stored in device-only Keychain storage, not in exported scripts or nearby transfers. Removing the key turns off new cloud requests. Previously downloaded generated audio may remain in the local cache. Voices are synthetic and do not clone cast members.

Permissions and sharing

Microphone access lets you record dialogue and speech. Camera access lets you scan printed pages. The system photo picker grants access only to the items you choose. Local network and Bluetooth permissions support nearby cast sharing. You can manage permissions in iOS Settings; file selection and installed Apple voices remain available without camera or microphone access. Pro document import still requires internet and enabled OpenAI requests.

Exporting a show package or joining a nearby workroom shares script data and included recordings with the recipients you choose. Recipients and services you use to transfer or store a package can keep their own copies. Check that you have permission from script owners and recorded performers before sharing. The developer does not receive those packages through the app.

Retention and deletion

Saved scripts and recordings remain until you delete them. Import drafts, temporary attachments, and completed AI sections survive closing and reopening; use Discard draft to remove them. Saving a script removes the temporary import checkpoint and retains the reviewed script and its OpenAI transcription in your library. Saved or discarded line edits clear their draft. Deleting a script removes its associated personal progress and drafts. Temporary recording takes are removed when discarded or their capture screen closes; successful transcription removes its temporary take.

Generated OpenAI cues are cached locally, up to 100 MB, to reduce repeat requests. Clear Downloaded AI Audio in Apple & OpenAI settings removes this cache. Deleting a script does not clear the shared generated-audio cache. Use Remove Saved Key to remove the API key. These actions do not remove exported copies, device backups, original imported files, or previously transmitted provider data. Manage those copies with their respective recipient or service. Deleting the app does not cancel a subscription; remove the saved key in the app first if you want it removed from Keychain.

An active subscription is not required to manage saved data. From the subscription screen, choose Manage saved data to export or delete saved scripts, remove your API key, or clear downloaded AI audio.

Purchases and support

Apple handles subscriptions, payment details, billing, and refunds. Cue Room checks access through StoreKit; it does not send your purchase records to a developer server. See [Apple's privacy policy](#). OpenAI charges are separate and are handled through your connected API account.

If you email support, we receive your email address and the message or attachments you choose to send. We use these to respond and resolve the issue, and retain correspondence as needed for support and applicable legal obligations. Do not send API keys, passwords, or scripts you lack permission to share. You may request access, correction, or deletion of support correspondence at curtaincallsupport@icloud.com; applicable legal rights are unaffected.

Policy changes

Updates will be published with a revised effective date at [Cue Room Privacy](#). Material changes to optional data sharing will be explained before the changed feature is used.

Cue Room Terms of Use

Effective September 7, 2026

Cue Room is provided by Arman Siddiqui. These terms explain the rehearsal service and subscription. The app is licensed under [Apple's Standard End User License Agreement](#). These service terms supplement that license and do not replace it or limit rights that cannot legally be excluded.

Your subscription

Cue Room Plus is a monthly auto-renewable subscription providing script import and organization, rehearsal with installed Apple voices, cast recordings, progress, and optional AI connections. A sample rehearsal is available before purchase. Device capabilities and permissions determine which camera and speech features are available. Pro document import requires internet and enabled OpenAI requests.

The intended United States price is \$15.00 per month. The localized price shown by the App Store purchase sheet, including applicable taxes as presented by Apple, is the price you authorize. Payment is charged to your Apple Account on confirmation. The subscription renews automatically unless canceled at least 24 hours before the current period ends; renewal charges may occur within the 24 hours before renewal. No free trial is included unless Apple explicitly presents one in your purchase offer.

Manage or cancel in Settings, your Apple Account, Subscriptions, or through Manage subscription in Cue Room. Cancellation takes effect at the end of the paid period unless Apple specifies otherwise. Deleting the app does not cancel billing. Restore purchases using the same Apple Account. Refund requests are handled by Apple at [Report a Problem](#), subject to applicable rights. Your saved scripts are not deleted when your subscription ends; keep exported copies of work you need independently of the app.

Manage saved data remains available from the subscription screen without paid access. You can export or delete saved scripts, remove your OpenAI key, and clear downloaded AI audio there.

AI costs and availability

The Cue Room subscription does not include OpenAI credits. Connecting your own OpenAI API key and enabling requests authorizes usage against that account. OpenAI's pricing, usage limits, terms, and availability apply separately. Installed Apple voices do not require an OpenAI key or credits. Pro ingestion of PDF, image, Word DOCX, and text documents uses OpenAI exclusively and requires a connected API key with available credits.

Document transcription and AI script analysis can misread words, misidentify speakers or roles, or exclude passages. Review the cast, dialogue, directions, and uncertain passages against your source script before rehearsing. OpenAI script analysis uses separate API credits when you tap Continue with OpenAI; API credits are not included in your subscription. The importer saves completed sections and may retry a failed section up to two times automatically; transmitted requests may incur charges even if canceled. OpenAI rehearsal may prepare an upcoming reader cue before playback. Optional paraphrase checks also use API credits and can miss or misjudge a cue; pause and Next remain available. Generated voices are synthetic. Their delivery may vary, and Cue Room does not promise a particular voice, performance, transcription accuracy, or third-party model indefinitely.

Your scripts and recordings

You retain your rights in content you import or create. Importing a script does not grant rights to publish or distribute it. Use material and recordings you have permission to process, rehearse, record, and share. Obtain the relevant performers' permission before recording or sharing them. Do not use the app to violate another person's rights, impersonate them deceptively, or break applicable law. Follow the terms of any AI provider you connect.

Cue Room stores your work locally. Export copies through the script menu if you need a backup or want to move devices. You are responsible for the recipients you choose and for protecting exported copies and API credentials. Permission to process your content is limited to operating the features you choose. The developer does not acquire ownership of your scripts or performances.

Support and changes

Contact curtaincallsupport@icloud.com for support, rights complaints, or questions about these terms. Include the app version and a description of the issue; do not include credentials. We may update the app and these terms as functionality changes. The current terms and effective date will remain available at [Cue Room Terms](#). App Store billing changes follow Apple's required notices and consent process.

Apple's Standard EULA governs the license, warranties, and liability, subject to applicable law. These terms do not impose a separate arbitration agreement or waive statutory consumer rights. Privacy handling is described in the [Cue Room Privacy Policy](#).
